

A PCA plot showing the first two principal components, Dim 1 (36.20%) and Dim 2 (19.21%). The plot displays 192 numbered samples. A vertical dashed line at Dim 1 = 0 and a horizontal dashed line at Dim 2 = 0 divide the plot into four quadrants. The samples are clearly separated into two main clusters: one on the left (negative Dim 1) and one on the right (positive Dim 1). The left cluster is further divided into a top group (positive Dim 2) and a bottom group (negative Dim 2). The right cluster also shows a top group (positive Dim 2) and a bottom group (negative Dim 2), with some overlap between the two groups on the right side.

Dim 1 (36.20%)
